

Which Configuration is best for me??

There are two decisions to make when purchasing WinForecast - what type of licence do you need, and what configuration do you require? (See "Price List & Order Form" for prices on these configurations.)

Licences

Standalone Licence

Is installed to the local hard drive of one computer. This licence can be moved at any time.

Server Licence

Single User Server:

Is installed to the server and can be setup to be accessed by as many workstations as you like, but only one workstation can use the software at a time.

Additional Server Users:

Allows more than 1 workstation to access the server version at any one time (controlled by the number of users you purchase). Users can be temporarily removed from the Server and transferred to portable machines (so they can be run away from the network), provided at least one user is left on the server.

(Note: Additional server users must be either ALL standard or ALL consolidation. There is no mixing. See below for details of the consolidation option).

Configurations

Standard

Allows you to create unlimited forecasts for any number of companies, over any number of years. A maximum of 5 departments are available per forecast file with this option ie providing 5 Sales & 5 Direct Costs Sections within one integrated report set. (Please note no Consolidation of forecast files is available.)

Consolidation

The Consolidation option allows you to add forecast files together; therefore if you have a number of companies or one company with a number of departments, you can forecast for each individual entity/department and then add the entities/departments together.

You can then eliminate any inter-company or inter-departmental transactions. Any changes to the individual forecasts will automatically feed through to the consolidation, when you next view it. (The Consolidation version also includes all features found in the Standard version.)

Other

Forecast Analyser

Forecast Analyser works in conjunction with WinForecast Professional Version 4 to provide financial analysis on forecasts generated by WinForecast therefore eliminating the need to re-enter data. (See enclosed brochure headed Forecast Analyser – Introducing the next level to Fast Effective Financial Forecasts)

Report Generator

A Word 97/Word 2000 template, which allows for data, graphs and reports from WinForecast forecasts to be incorporated in Word documents. (See enclosed example headed ABC Pty Ltd 2006/07 Financial Plan)

Support

See "Benefits of WinForecast Support".

If you need any further assistance in deciding which configuration is best for you, please contact WinForecast.
